Thank you for your purchase of the KAWAI FS660 Personal Keyboard.

How to use this manual

This manual is divided into two sections: Basic Operation and Advanced Operation.

The Basic Operation section will help you become familiar with the basic, but extremely powerful, features of the FS660. By the time you’re through with this first section, you will have a clear understanding of how to select Tones and Rhythms, adjust Tempo, use Auto-Accompaniment and Recorder functions, and operate ONE FINGER AD-LIB.

The Advanced Operation section will help you explore FS660’s more advanced features such as combining Tones, adding Effects, and programming Accompaniments or ONE FINGER AD-LIB phrases. To get the most from your FS660, please read this entire manual carefully -- beginning with the important information on page B-1.

Should you have any trouble getting the FS660 to perform properly, please refer to the Table of Contents (on the next page) and review the pertinent section of this instruction manual.

Have fun learning to play your FS660!

■ NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

■ This instrument complies with the limits for class B digital apparatus, pursuant to the Radio Interference Regulations, C.R.C., c. 1374.
Table of Contents

1. Basic Operation

- Creating Rhythm and Auto-Accompaniment Patterns: A – 10
- Creating Basic Patterns: A – 11
- Creating Fill-in and Intro/Ending Patterns: A – 12
- Storing the Newly Created Patterns: A – 14

  - Explanation of AUTO 3: A – 6
  - Explanation of AUTO 4: A – 7
  - Introducing Accompaniment
    - Hold: A – 8
- Using Hand Percussion: A – 9

3. Appendices

- Appendices: Ap – 1
- Specifications: Ap – 2
1. Basic Operation
Before Using the FS660

1. Cautions
- Do not subject the FS660 to severe shocks.
- Do not expose the FS660 to direct sunlight, or high temperatures such as inside your car on a warm day.
- Do not use the FS660 where there is excessive moisture or dust.
- Do not disassemble or attempt to modify the FS660.
- Should the FS660 become soiled, clean it using a soft, dry cloth. If this does not remove the stain, wet the cloth slightly before wiping. Never use alcohol or thinner to clean the FS660.
- Do not allow foreign matter to enter the gaps between the keys or around the buttons.

2. Connecting the power supply
The FS660 can use either your home AC power outlet or dry cell batteries as a power source.

To insert batteries:
1. Turn the unit over and remove the battery cover.
2. Insert six Size C dry cell batteries. Be sure that they are aligned correctly.
3. Replace the battery cover.

Notes:
- As the batteries reach the end of their usable lifespan, the sound of the FS660 will become quieter and the sound quality will begin to change. The unit may also begin to function improperly. At that time, you should replace all six of the batteries.
- Do not mix battery types, as this may cause problems such as battery fluid leakage.
- Remove the batteries when not using the FS660 for long periods of time.
Before Using the FS660

- To use an AC power outlet:
  Connect a PS-121 (or PS-123) adaptor (available separately) to the adaptor terminal on the rear panel of the FS660. Then, connect the adaptor to a wall socket.

Important:
We recommend that you use a KAWAI AC adaptor (9 or 12-volt) with the FS660. If you decide to use a universal adaptor (from another manufacturer) be sure that the voltage selector on that adaptor is set between 9 to 12 volts. The polarity selector must be set to "negative" (−) polarity. If your universal adaptor is set on "positive (+)", your FS660 will not operate (or will run on batteries until the batteries are drained).

- Connecting the FS660 to an audio device
  To enjoy listening to the sound of your FS660 through your home stereo system or other external audio device, purchase a standard connecting cord (Stereo RCA pins) at an electrical goods shop or an audio specialty store. Use it to connect the FS660's LINE OUT jacks to the LINE IN or AUX IN jacks on your audio system.

- About the FS-660's internal memory
  The contents of the FS-660's internal memory will be kept stored by a battery built into the unit for a period of up to five years. The data that are maintained by this battery are as follows:
  — Song data recorded using the recorder.
  — Accompaniment Patterns created using the Pattern Maker.
  — Phrases created using the programmable ONE FINGER AD-LIB feature.

Note that if you turn the power switch ON while holding down keys C and E at the left end of the keyboard, all of the contents of the memory will be erased, and the keyboard's factory settings will be restored.

Note:
For a replacement Battery, contact your authorized KAWAI dealer.
Protective plastic covering on front panel

Your FS660 comes equipped with a thin plastic covering over the front panel, designed to protect the panel from dust and scratches. If you want to remove this covering, carefully use a fingernail to lift up one of the corners. Then, slowly peel off the covering and discard it.
① **POWER switch**  
This switch turns the power on and off. When the power is turned on, the display window will light, showing the number 0.

② **Volume Control buttons**  
The master volume buttons control overall volume of all notes played on the keyboard. Auto-Accompaniment volume can be adjusted separately using the ACC. VOLUME buttons found to the right of Master volume.

③ **DEMO button**  
Pressing this button starts the built-in demo song contained in the FS660's memory. Press it again at any time to stop the demo song.

④ **Display**  
The display window shows which sound or rhythm is currently selected. The window is also used to display a wide variety of other information which will be described later in this manual.

⑤ **Selector buttons**  
These buttons are used to increase or decrease the numbers in the display window by intervals of 1 or 10.

⑥ **Sound 1 and Sound 2 buttons**  
These buttons are used to select from among the one hundred sounds stored in the FS660.

⑦ **Effect buttons**  
These buttons allow you to add variety to the FS660's one hundred sounds by adding effects such as Pitch Bend, Sustain, Stereo Chorus, and Duet harmony to them.

⑧ **Lower mode buttons**  
These buttons are used to select the playing mode for the nineteen keys on the left end of the keyboard (the Lower Keyboard). There are three playing modes: "Normal mode" in which the Lower Keyboard plays the same sound selected for the Upper Keyboard; "AUTO mode" which lets the Lower Keyboard control FS660's Auto-Accompaniment; and "Drum mode" which lets the lower keys play the percussion sounds pictured on the case above each key.

⑨ **Rhythm button**  
This button is used when selecting from among the fifty rhythm and accompaniment patterns stored in the FS660's memory.

⑩ **Rhythm Control buttons**  
The FS660's Rhythm and Auto-Accompaniment section gives you four types of patterns to work with: Intro Patterns that can be used at the start of a song; Fill-in Patterns, to add contrast and variety during a song; Ending Patterns; and Basic Patterns which will be the foundation of any song using Auto-Accompaniment. These four types of patterns are controlled using these buttons. The two tempo buttons can be used to control changes in Rhythm and Auto-Accompaniment tempo. Lastly, the Sync. button lets you start when you press a key in the Lower Keyboard.

⑪ **ONE FINGER AD-LIB button**  
This feature allows you to sound like a "pro" with the touch of a finger.

⑫ **User Program buttons**  
These buttons allow users of the FS660 to:  
1) create Rhythm and Auto-Accompaniment Patterns (Basic, Intro, Fill-in, and Ending) with Pattern Maker; and  
2) create ONE-FINGER AD-LIB phrases.

⑬ **Recorder buttons**  
These buttons allow you to record the songs you write or perform on the FS660.
Overall Diagram and Explanation (Rear panel and Keys)

[Rear Panel]

14 Accompaniment Hold jack
This jack allows you to connect a hold pedal (model F-1, available separately) to the FS660. When connected to the Accompaniment Hold jack, the F-1 pedal can be depressed to add variety to Rhythm and Auto-Accompaniments. It can also function as a Damper Pedal which makes notes play continuously for as long as the pedal is held down.

15 Output jacks
These jacks are used to send the FS660's sound through external speakers or a stereo system.

16 Stereo Headphone jack
When stereo headphones are connected to this jack, the sound from the speakers is cut off. This allows you to play the FS660 at night and at other times when you might be concerned about disturbing others.

17 Power Adaptor jack
This jack is used when connecting a power adaptor (model PS-121 or PS-123, available separately).

Important:
See page B-2 for special instructions if you are using a universal AC adaptor.

[Keys]

18 Lower Keyboard (C1 ~ F#2)
Used when the chord detection or hand percussion function are selected.

19 ONE FINGER AD-LIB keys (G2 ~ B3)
Used when the ONE FINGER AD-LIB function is selected.

20 User program keys (C5 ~ C6)
Used for programming synthesizer sounds, Auto-Accompaniments (Pattern Maker), and programmable ONE FINGER AD-LIB phrases.

Note:
Of course, the keys in the special keyboard sections named above also function as a normal keyboard when all automatic settings are off.

Important:
Throughout this manual, the keys on the FS660 will be referred to in the following manner:

C1 stands for "the first C" on the keyboard, counting from the left.

B2 stands for "the second B" on the keyboard from the left.

The total range of the FS660 is C1 to C6.
Getting Started on your FS660: Selecting Sounds

This section will show you how to select and play any of the sounds listed in the "100 SOUND LIBRARY" on the FS660's front panel.

1. First, check to be sure that the POWER switch is turned ON. The display should be lit, showing the number 01.

   Try pressing one of the keys on the keyboard. You should hear the sound which is numbered 01 (PIANO 1).

2. Next, look at the Selector buttons and find the button marked +1. If you press it, the number shown in the display should change to 02.

   When you press one of the keys on the keyboard, you will hear sound number 02 (PIANO 2).

   You can use the Selector buttons to choose any of the FS660's one hundred sounds quickly and easily. The +1 button adds one to the number in the display, while the +10 button adds ten.

   The -1 button subtracts one from the number, and the -10 button subtracts ten. The number shown in the display is the number of the sound currently selected.

3. If you select one of the SPLIT sounds, which are numbered 41 through 50 in the "100 SOUND LIBRARY," you will find that the 19 keys on the left end of the keyboard (the Lower Keyboard) produce a different sound from the rest of the keys to their right.

   Also, note that the numbers "wrap around," so that pressing the +1 button when the display reads 00 will change the display to read 01.
This section will show you how to select and play any of the rhythms listed under the "50 RHYTHMS LIBRARY" on the FS660's front panel.

1. Begin by pressing the Rhythm button. The lamp above the switch will light, and the display will change to read 01.

2. If you press the Start/Stop button at this point, rhythm number 01 (DISCO) will begin to play. Now find the Selector buttons and press the +1 button. The display will change to read 02 and the rhythm will change to number 02 (DANCE).

You may use the Selector buttons in this way to select any rhythm you desire. The number in the display will change to indicate the number of the rhythm currently selected.

3. Try pressing the Sync/Fill in button at this point. The rhythm should play a "Fill-in" pattern suited to the rhythm currently selected. The Fill-in function is very effective when used to add variety within a song.

4. Next, press the Intro/Ending button. An Ending Pattern which matches the currently selected rhythm will play, and the rhythm performance will end. You can use this Ending Pattern to bring a song to an ending. Or, if you want the rhythm to end without the Ending Pattern, you can simply press the Start/Stop button.
Other Important Rhythm Functions

1. If you press the Intro/Ending button while the rhythm is off, you will hear an Intro Pattern, after which the Basic Pattern for the rhythm selected will begin to play.

2. If you press the Sync./Fill in button while the rhythm is off, the button functions as a Sync. button only. When Sync. button is pressed, the rhythm will begin to play the moment you press a key on the Lower Keyboard. The rhythm will sync hronize with your touch of the keyboard.

3. If you press the Sync./Fill in button and then the Intro/Ending button, the rhythm will begin to play (starting with the appropriate Intro Pattern) the moment you press one or more of the keys on the Lower Keyboard.

4. Try pressing the Intro/Ending button while the rhythm is playing. In this case, it operates as an Ending button. You will hear an Ending Pattern in a few seconds after pressing the button.
Changing Rhythm Tempo

You can use the Tempo buttons to change the tempo of the rhythm pattern. The Tempo ▼ button makes the tempo slower. The Tempo ▲ button makes the tempo faster. The longer you hold down each of these buttons, the more the tempo will change.

Pressing either of the Tempo buttons once — just after selecting a new rhythm — will change the tempo to a rate that suits that new rhythm. The display will briefly show " - - " to indicate that the "standard tempo" for that rhythm has been selected. Then, if necessary, you can use the Tempo buttons to adjust the tempo further.

When you press and hold down either of the Tempo buttons, the display will change to read d'n (short for "down") or u'P depending on which Tempo button you are pressing. When the tempo reaches maximum or minimum, the letters in the display (dn or UP) will disappear.

The small lamp at the bottom of the display will also blink in time with the tempo.
Using Auto-Accompaniment for easy ensemble playing

The FS660's Auto-Accompaniment section is one of the most powerful found on any portable keyboard. It has the capability of working in four different "modes". In this Basic Operation section of the manual, however, we will deal only with the first mode called "AUTO 1".

When your FS660 is turned on, it is automatically set to AUTO 1 operation. In AUTO 1 mode, you can play chords with your left hand (which will generate full accompaniment) while playing the melody with your right hand. Let's try the Auto-Accompaniment section in this mode.
Using Auto-Accompaniment Section: AUTO 1

This Auto-Accompaniment mode (AUTO 1) allows you to create a realistic ensemble performance by simply pressing and holding left hand chords as you play the melody.

The nineteen keys on the left end of the keyboard (which we call the Lower Keyboard) are used to play the chords which control the Auto-Accompaniment. Up until now we have used the Lower Keyboard as a regular keyboard.

1. First, prepare the Lower Keyboard for chord use.

   Find the **Lower mode** buttons and press the **Auto** button. The display will briefly change to read \( R_U \).

2. Start the rhythm.

   Select a rhythm using the **Rhythm** button and the **Selector** buttons. Then, start the rhythm by pressing the **Start/Stop** button or the **Intro/Ending** button.

3. Using the Lower keyboard to activate Auto-Accompaniment.

   Now, try pressing one or more of the keys on the Lower keyboard. You should hear the Auto-Accompaniment begin to play.

   Try using the **Sync./Fill in** button and the **Intro/Ending** button. The tempo of the Auto-Accompaniment can be controlled using the **Tempo** buttons.

   The other three modes of Auto-Accompaniment are discussed in the Advanced Operation section of this manual.
By now, we hope you’ve become very familiar with the Auto-Accompaniment function of the FS660. But you may be wondering what you can do to spice up the melody a bit. Well, the ONE FINGER AD-LIB function is just for you! This feature separates KAWAI keyboards from all others.

1. What is ONE FINGER AD-LIB?

ONE FINGER AD-LIB is a feature which allows anyone, any level of musical ability, to sound like a "pro". With the touch of a finger, you can play hundreds of impressive ad-lib melodies with full Auto-Accompaniment and chord progressions. It's great fun!

The ONE FINGER AD-LIB phrases are determined by rhythm you select. For example, there are funky ad-lib phrases for rhythm number 05 (SLAP FUNK), and some exciting rock’n roll phrases that go well with number 16 (ROCK 'N' ROLL). There are seventeen preset ONE FINGER AD-LIB phrases for each of the FS660's fifty rhythms: a total of 850 phrases in all!

2. How does ONE FINGER AD-LIB work?

a) Use the Rhythm button and the Selector buttons to select a rhythm. Next, press the ONE FINGER AD-LIB button. The small dot lamp on the lower right side of the display will light up. (See illustration 2-a).

b) Now, press and hold down one of the keys in the ONE FINGER AD-LIB section of the keyboard (shown in the drawing at left). By holding down a single key, you can play an entire ad-lib phrase! Try other ONE FINGER AD-LIB keys. Note that each key plays a different phrase and that some keys use different sounds than other keys.
Using ONE FINGER AD-LIB to play like a pro!

c) Adding Rhythm and Auto-Accompaniment. Next, press the Lower mode Auto button. The display should change briefly to read RU.

Start the Rhythm using the Intro/Ending button or the Start/Stop button. The Rhythm and Auto-Accompaniment should begin to play. Listen closely! Notice that the Auto-Accompaniment chords are changing automatically. The FS660 has been programmed so that each Rhythm is accompanied by an authentic sounding chord progression that plays automatically.

d) Now hold down one of the keys in the ONE FINGER AD-LIB section of keyboard. The ad-lib phrase will play. If you hold the AD-LIB key down, you'll notice that the phrase changes automatically with the chord progression!

e) If you decide that you'd like to change the preset chord progression, play any chord on the Lower Keyboard. This will override preset progression. Then, the ONE FINGER AD-LIB phrases will change to match your own chords.

f) To return to the preset chord progression, press the ONE FINGER AD-LIB button twice.

A note about the ONE FINGER AD-LIB chord progressions.

When you start the Auto-Accompaniment with the ONE FINGER AD-LIB function turned ON, the chord progression that plays is in the key of C. For example, the progression for rhythm number 18 (50'S ROCK) is as shown at left.

The next page will describe how you can play ONE FINGER AD-LIB music in a different key.
Using ONE FINGER AD-LIB
to play like a pro!

Changing Keys

1. Those of you who won’t be happy unless the chord progression for 50’S ROCK is in the key of "A" should perform the following operation (after stopping the rhythm for a moment):

   (1) Check that the ONE FINGER AD-LIB button and the Lower mode Auto button have both been turned ON.

   (2) Before starting the rhythm, press the A key shown in the Illustration 1-2 at left.

   (3) Then press the Intro/Ending button or the Start/Stop button to start the Rhythm and Auto-Accompaniment. The chord progression should now be in the key of "A" as shown at left.

2. Some of you might be happier if the chord progression for 50’S ROCK were in a minor key. To do this, you can perform an operation like the one described below (again, you should stop the rhythm first):

   (1) Check that the ONE FINGER AD-LIB button and the Lower mode Auto button have both been turned ON.

   (2) Play a Cm chord as shown in Illustration 2-3 at left.

   (3) Then press the Intro/Ending button or the Start/Stop button to start the Rhythm and Auto-Accompaniment. The chord progression should now be in the key of "C minor" as shown at left.

There are two ONE FINGER AD-LIB chord progressions for each Rhythm – one in a major key and one in a minor key. If you would prefer that the chord progression play in the key of Am, just perform the operation above playing an Am chord instead of the Cm chord we used in the example.

Now select different Rhythms and begin exploring the 850 ONE FINGER AD-LIB phrases built into the FS660!

Have fun!
Special use of ONE FINGER AD-LIB

We’ve recorded some special melodies into the FS660 for use with ONE FINGER AD-LIB. These melodies can be found on the ONE FINGER AD-LIB notes associated with Rhythms 46 through 48 (Ballet, Bolero, and Nocturne). Here’s how to play them:

(1) First, select a rhythm. Let’s try #47 (BOLERO).

(2) Next, make sure that the ONE FINGER AD-LIB function is turned on -- and the AUTO function is on.

(3) Press Start button to get the rhythm going. You may want to set the "standard tempo" for BOLERO by pressing either of the Tempo buttons at this time.

(4) Now, hold down the lowest ONE FINGER AD-LIB key (G2). Make sure that your initial hit of the G2 key is on the main beat (if you listen to the rhythm for awhile, you’ll hear this main beat). Can you hear the first melody notes of BOLERO playing when you hold down G2?

(5) The rest of the melody can be played as you move up the ONE FINGER AD-LIB keys in chromatic fashion (G2, G#2, A2, A#2, etc). Each successive key is programmed with three full beats of the BOLERO melody.

(6) Now, let’s try putting the whole melody together. Make sure the BOLERO rhythm is playing. On the main beat, hold down the G2 key for three beats. Then, immediately hold down the G#2 key for the next three beats; then the A2 key for the next three beats; and so on, until the entire melody is played. By the time you reach the end of the ONE FINGER AD-LIB region, you should have played BOLERO!
Special use ONE FINGER AD-LIB

This same process works for Rhythms #46 and #48 with the following changes in the process:

**Rhythm #46 (Ballet)**

The "Swan Lake" theme used on these notes is based on four-beat phrases. So, hold down each ONE FINGER AD-LIB notes for four beats instead of three. Also, the BALLET rhythm requires that you press the G2 key *at the same time* that you press the **Start** button. If you press these at different times, the ONE FINGER AD-LIB melody notes will not match the preset chords.

**Rhythm #48 (Nocturne)**

Start on G2. Hold each ONE FINGER AD-LIB note for *six* beats, since NOCTURNE is based on six-beat phrases. Press the G2 key at the same time that you press **Start** button.
The Mixer Section

So far, we have covered the basics of the FS660's Rhythm, Auto-Accompaniment, and ONE FINGER AD-LIB functions. This section will show you how to use the Mixer Section.

The volume of each part can be adjusted using the **Volume** buttons. Volumes may be set to any of sixteen levels, which are numbered 01 through 16. The number of each volume setting will appear briefly on the display each time a volume button is pressed.

1. **MASTER VOLUME** buttons
   These buttons control the overall volume of the FS660 which includes the volume of the Rhythm, Auto-Accompaniment, ONE FINGER AD-LIB phrases, and your own manual playing.

2. **ACC. Volume** buttons
   These buttons control the volume of the Auto-Accompaniment part.

   ACC. VOLUME will help you keep the Auto-Accompaniment part of your music in balance with the melody parts.
Using the Real-Time RECORDER

To record your performances:

This section will show you how to record the songs you perform using the FS660's RECORDER feature. The RECORDER allows you to record up to three different songs.

Here are the steps:

1. First, set up the FS660 for your performance.

   Begin by selecting the Sound, Rhythm, and Lower Keyboard mode settings that you will require to perform your song.

2. Press the Rec/end button. You will hear the sound of the metronome. (If the metronome does not start, see step 6 on the following page).

3. Start playing! Everything you play, including ONE FINGER AD-LIB phrases and changes in Sounds or Rhythms, will be recorded as you played it. That's what we mean by "Real-Time". What you play is what you get.

4. When you are done with your song, press the Rec/end button once more. The recording will end, and your song will be recorded.

5. Now let's try playing the song back. Press the Play/stop button. The song you just recorded should begin to play. If you would like to stop the performance without listening through to the end, just press the Play/stop button once more.
6. If you would like to record over a song which has already been recorded, it is necessary to erase that song first. You might try pressing the **Rec/end** button to record a new song, but would find that the metronome will not start. (This is to prevent you from accidentally recording over a song which you would like to keep!)

In order to erase the existing song, press the **Rec/end** button and the **Play/stop** button simultaneously. The song will be erased instantly.

**Note:**

When recording songs using the **RECORDER**, the tempo information will not be recorded. This allows you to record songs at a slow tempo and play them back at a fast tempo.
Congratulations!
You've finished learning the FS660's Basic Operations.
Now have more fun exploring the Advanced Operations section.

This completes the Basic Operation section of the FS660 instruction manual. We trust that this first section has given you a good basic knowledge of FS660's powerful features.

But you've only just begun to explore the full capability of the FS660! The Advanced Operation section will help you to learn how much more can be done with this powerful instrument.
As a first step in this Advanced Operation section, let’s try combining two of the sounds listed in the FS660’s “100 SOUND LIBRARY,” for a rich DUAL sound effect.

1. First, select any sound you like using the Selector buttons. As an example, we will choose sound number 01 (PIANO 1).

2. Next, press the Sound 2 button. The lamp above the button will light up. Now, select another sound. [We will choose number 02 (PIANO 2) for our example.]

3. Now press both the Sound 1 button and the Sound 2 button simultaneously. The lamps above these buttons should start blinking and the display should change to read $\delta'$. If you press one of the keys on the keyboard, you will hear the combination of sounds 01 and 02, PIANO 1 and PIANO 2.

— What does $\delta'$ mean? —

When two sounds are played at once, varying the pitch of the sounds slightly with respect to each other makes the combined sound much richer. This varying of the pitch of two sounds is called "Detuning." The FS660 allows you to detune two sounds when combining them using the DUAL effect. The "$\delta'$" in the display therefore stands for "Detune," and the "$\delta''$" following it represents the difference in pitch between SOUND 1 and SOUND 2.

4. Press the +1 button one time. The display should change to read $\delta'$. Now, when you press a key on the keyboard, you will hear a slightly richer sound. You can use the Selector buttons to set a detune value of 0 to 7. The higher the number is, the greater the difference in pitch becomes. When our PIANO 1/PIANO 2 combination is set to a detune value of 7 ($\delta''$), the result is a "honkytonk" sounding piano. Using the DUAL effect with 7 levels of detune, you have up to 32,400 different DUAL sound variations available.
Advanced Use of Sounds: 
Adding Effects

The FS660 has a variety of effects which can add realism or excitement to your selected sound.

1. Pitch bend:
Pitch bend is an effect by which the pitch of a sound is bent smoothly upward or downward. It is useful for copying the sound of a guitar being played with a "Choking" technique. Try pressing the Bend down button while holding down one of the keys on the keyboard. The pitch of the sound should bend smoothly down a single step, then return to its original pitch when the Bend down button is released. In a similar way, the Bend up button bends the pitch of a note smoothly upward a single step.

2. Sustain:
Sustain is an effect which lets notes "SOUND" for a longer duration. Pressing the Sustain button activates the effect. Pressing it a second time cancels the effect.

3. Stereo chorus:
Pressing the Stereo chorus button activates an effect which adds a deep stereo richness to the currently selected sound. Pressing the button a second time cancels the effect.

4. Duet:
When the Duet button is pressed, the FS660 will add a harmonizing note to each melody note that is played on the keyboard, so you can enjoy a duet performance while playing only one melody note at a time. This function is extremely effective when used together with the Auto-Accompaniment function. Pressing the button a second time turns the effect off.

Important Notes:

1. When you choose the DUAL sound effect, the stereo chorus effect, or the duet effect, the number of notes that can be heard at the same time will be reduced.

2. The DUAL sound effect is not possible when one of the SPLIT sounds, numbered 41 through 50, is chosen as SOUND 1 or SOUND 2.

3. If you press the Stereo chorus button while using the DUAL sound effect, the stereo chorus effect will be applied only to the sound selected as SOUND 1.

4. If you press the Duet button while using the DUAL sound effect, the harmonizing note will be SOUND 1.
Advanced Use of Auto-Accompaniment Section:

The FS660's Auto-Accompaniment section is one of the most powerful found on any portable keyboard. It has the capability of working in four different modes. In the Basic Operation section, we discussed only the first mode, AUTO 1, which is the standard operational mode for most portable keyboards. In this Advanced Operation section, we will introduce the remaining three modes: AUTO 2, AUTO 3, and AUTO 4.

Having four different Auto-Accompaniment modes allows the FS660 to be enjoyed by people at all levels of musical ability -- from beginners to experienced professionals.

Let's outline the four modes of Auto-Accompaniment offered by the FS660:

1. **Auto 1:**
   - Lets you play single-finger or fingered chords with your left hand while playing the melody with your right. Your left hand chords trigger the Auto-Accompaniment. For a review of AUTO 1 operation, see the Basic Operation section.

2. **Auto 2:**
   - Lets you play a bass line with your left hand while playing chords and melody with your right. Preset Auto-Accompaniment chords will play -- but are triggered by the chords you play in your **right hand**.

3. **Auto 3:**
   - Great for the persons who want to sing the melody as they play an Auto-Accompaniment! Like AUTO 2, you can play a bass line with your left hand while playing chords and melody with your right. With AUTO 3, however, the standard Auto-Accompaniment chords do **not** play. Rather, the chords you play with your right hand (any chords) become part of the Auto-Accompaniment. AUTO 3 lets you play the FS660 like a piano -- while the bass and Auto-Accompaniment chords follow.

4. **Auto 4:**
   - The mode to use when you're not sure what chords to play. AUTO 4 has a preset chord sequence for each rhythm (the same sequence used with ONE FINGER AD-LIB). You can play through the entire chord sequence by playing successive notes (in order starting with C1) in the Lower keyboard with your left hand.

Let's try using these three new Auto-Accompaniment modes, beginning with AUTO 2.

**Note:**

ONE FINGER AD-LIB is not operational when the FS660 is in AUTO 2 or AUTO 3.
Explanation of AUTO 2

AUTO 2 is an advanced form of Auto-Accompaniment which lets you play a bass line with your left hand while your right hand plays the chords and melody.

How is AUTO 2 different from AUTO 1? In AUTO 1, the Auto-Accompaniment Chords are triggered by the chords you play in your left hand. In AUTO 2, your right hand notes trigger the Auto-Accompaniment Chords.

- Why is AUTO 2 valuable? There are two primary reasons:
  1. Many people feel more comfortable playing chords with their right hand rather than their left. AUTO 2 suits that playing style better than AUTO 1 does.
  2. If you play the FS660 as you would normally play a piano while using AUTO 2, the preset Auto-Accompaniment chords will follow the chords of your performance.

Let's see how AUTO 2 works:

1. With the rhythm stopped, press both the Rhythm button and the Sound 1 button simultaneously, then press the Intro/Ending button. The display should begin to flash alternately between R1 and the number 01. This shows that the Auto-Accompaniment is currently set to AUTO 1.

2. Press the Selector +1 button to change the number in the display to 02.

3. Press the Lower mode Auto button several times until the display briefly flashes R1. You may have to press the Auto button more than once before you actually see R1 appear in the display. It will flash for less than a second as you press the Auto button.

4. Select a rhythm using the Rhythm button and the Selector buttons. This time try Rhythm pattern number 03 (SOFT FUSION). Also, select sound number 04 (E. PIANO 2) using the Sound 1 button and the Selector buttons.

5. Press the Start/Stop button. The rhythm will start. Try playing the music at left along with the rhythm.
Explanation of AUTO 2

Can you hear how AUTO 2 allows the FS660 to follow your playing?

Now let's go on to the next Auto-Accompaniment mode – AUTO 3.

Note: Here's some playing information about AUTO 2

1. The Auto-Accompaniment changes when you press three or more keys (total) on the Lower or Upper Keyboards. The Auto-Accompaniment chords will not change when you play a chord that FS660 cannot recognize as a chord. See page Ap-1 for a chart of the chords that FS660 can recognize.

2. When you press only one key on the Lower Keyboard, only the Auto-Accompaniment bass part will change.

3. If you press more than one key on the Lower Keyboard, the bass part will respond to the lowest key pressed.

4. When only keys on the Upper keyboard are pressed, pressing three or more keys will cause the Auto-Accompaniment to change.

5. When AUTO 2 is activated, neither ONE FINGER AD-LIB nor DUET will function.
The key aspect of AUTO 3 is "freedom in choosing chords."

Like AUTO 2, this third Auto-Accompaniment mode lets you play a bass line with your left hand while you play chords and melody with your right hand. AUTO 3 is different in that the preset Auto-Accompaniment Chords do not play. Rather, the chords that you play with your right hand actually become part of the Auto-Accompaniment. When you play in normal piano style, everything follows you!

Furthermore, with AUTO 2, you are limited to only the chord forms that the FS660 can play as part of the Auto-Accompaniment. With AUTO 3, any chord form you play can become part of the Auto-Accompaniment. You have total freedom in using chords.

Let's try AUTO 3:

1. With the rhythm stopped, press both the Rhythm button and the Sound 1 button simultaneously, then press the Intro/Ending button. The display should begin to flash alternately between "$4-U$" and the number 03 (or 02).

2. Use the +1 Selector button to change the number in the display to 03. This indicates that you have selected AUTO 3.

3. Press the Lower mode Auto button until the display briefly flashes "$4-U." Again, you may have to press the Auto button more than once before you see "$4-U." appear in the display.

4. Use the Rhythm button and the Selector buttons to choose Rhythm number 03 (SOFT FUSION) once again. Also, select sound number 04 (E. PIANO 2) using the Sound 1 button and the Selector buttons. (You may have already selected this panel setting from our AUTO 2 example).

5. Press the Start/Stop button. The rhythm will start. Try playing the music at left along with the rhythm.

6. Can you hear how the chords you play with the right hand become part of the Auto-Accompaniment? Try playing the music to one of your favorite songs and sing the melody. You'll like the result! Plus, AUTO 3 will allow the FS660 to follow every chord you play.

Note: The playing information about AUTO 3 is the same as that of AUTO 2. Please refer to page A – 5.
Explanation of AUTO 4

AUTO 4 is the best Auto-Accompaniment mode when you're not sure what chords to play. The FS660 has a preset chord sequence (the same one used with ONE FINGER AD-LIB) for each of the 50 Rhythms. You activate the preset sequence by pressing the notes of the Lower Keyboard (beginning with C1) in successive order. Here are the steps:

1. With the rhythm stopped, press both the Rhythm button and the Sound 1 button simultaneously, then press the Intro/Ending button. The display should begin to flash alternately between "R_U" and the number 01 (or 02 or 03).

2. Press the +1 Selector button to change the number in the display to 04. This indicates that the FS660 is in AUTO 4.

3. Press the Lower mode Auto button until the display briefly flashes "R_U".

4. Select Rhythm number 03 (SOFT FUSION) and sound number 04 (E.PIANO 2) as you did in the previous pages.

5. Press the Sync./Fill in button. The rhythm will not start until you press a key in the Lower Keyboard.

6. Now, count "ONE...TWO...THREE...FOUR" at the same tempo as the blinking red "Tempo" dot in the display. These are the "Beats" of the Auto-Accompaniment. Starting with the lowest "C" (called C1), hold each note of the Lower keyboard in successive order (C...C#...D...D#) for four beats. You'll hear the chord sequence change as you move up the chromatic scale.

With AUTO 4, you won't have to worry about chords. It lets you concentrate on making great melodies with your right hand.
Accompaniment Hold is an exciting new feature from KAWAI that allows you to control the rhythmic placement of Accompaniment Chords while you play. To operate Accompaniment Hold, you'll need to purchase a foot switch (model F-1, sold separately).

- Connect the F-1 foot switch to the Accompaniment Hold jack on the rear panel.
- Whenever you depress the foot switch pedal, the bass drum, open hi hat, bass, and chord will play in unison.
- If you hold the pedal down, the bass and chord sounds will be held until you release the pedal.

When will the Auto-Accompaniment Hold feature be most useful?

1. When you want to add rhythmic variety to your accompaniment by holding some chords and letting others play normally;
2. When you want to add syncopation to an accompaniment; and
3. When you want to add accents to an accompaniment.

Try Accompaniment Hold with several different Auto-Accompaniments to see how effectively it can add interest and excitement to your performances.

Important:
Before moving on to the next section, press both the Rhythm button and the Sound 1 button simultaneously, then press the Intro/Ending button and use the Selector buttons to return to AUTO 1.

Note:
The F-1 footswitch can also operate as a Damper (sustain) Pedal. For details, see Page A-20.
Using Hand Percussion

In addition to its use with Auto-Accompaniment, the Lower Keyboard can also be used to play percussion instruments.

First, you must set the lower keyboard to play hand percussion. Press the **Lower mode Drum** button. The letters 'dr' will appear in the display for a brief moment.

Now, when you press one of the keys on the Lower Keyboard, you will hear the sound of the instrument pictured above that key. This feature allows you to enjoy playing simple drum solos in time with the rhythm. Of course, these drum sounds can be played even when the rhythm is turned off. The drum sounds are assigned to the keys on the Lower Keyboard as shown in the chart at left.

Note that if you press the **Lower mode Drum** button once more, the display will briefly change to read 'no' for Normal, and the Lower Keyboard will function as a Normal Keyboard once again.
Have you ever wished you could take your own musical ideas and put together a dynamite Auto-Accompaniment pattern of your own? With the FS660, you can!

Using the programming functions of the FS660, it is possible for you to create Intro, Fill-in, Ending, and Basic patterns for each of the FS660's Auto-Accompaniment parts: rhythm, bass, and chords. You can build these patterns from scratch, or you can alter one or more elements (chord, bass, drums) of a preset pattern. This is an extremely powerful feature that offers you tremendous creative freedom!

As an example, let's try making a few changes to Rhythm number 15 (POP ROCK) to develop a new pattern.

1. Use the Rhythm button and the Selector buttons to select the POP ROCK pattern (number 15).

2. Let's begin by changing the Basic pattern.

   With the rhythm turned OFF, press the User Program Pattern & O.F. AD-LIB button. The display will change to read br, which is short for "Basic." This indicates that the Basic pattern has been selected.

- First, let's change the Rhythm pattern

Find the USER PROGRAM keys at the right end of the keyboard which are identified by PATTERN MAKER above the keys (F#5 to A5). These are the USER PROGRAM keys for changing accompaniments.

Press the G#5 key (labelled "Rhythm Clear"). The display should change to show the number of the POP ROCK pattern (that is, number 15).

The basic Rhythm pattern for the POP ROCK pattern is at left:

Let's try adding the high clap sound on top of the snare drum. Just press the D#1 key, which controls the high clap sound, in time with the snare drum (on beats 2 and 4).

Feel free to add other rhythm sounds as you like.

If you make a mistake with one sound for example, (high clap), use the RHYTHM ERASE key (A5) to remove the mistake. Hold down the RHYTHM ERASE key (A5) while you press the "high clap" key (D#1). All high clap sounds will be instantly erased.
Pattern Maker: Creating Basic Patterns

- **Next, let's change the bass part**
  If you're finished with the Rhythm pattern, let's move on to the bass pattern. Press the G5 key (labelled "BASS CLEAR") on the keyboard twice (see note at bottom of page). The bass pattern should disappear, and the display will change to show the number 58. This indicates that sound number 58 (E. BASS) is the sound being used for the bass part in this pattern.

  Let's create a bass part like the one given at left. Use the keys from C1 to B4 to input the bass part. If you want to use a sound other than E. BASS for the bass part, select the sound you prefer using the **Selector** buttons to change the sound number shown in the display. You should also use the **Acc. Volume** buttons to set the volume of the bass part at this time.

- **Last, let's change the Chord part**
  Press the F#5 key (labelled "Chord Clear"). The number 01 should appear in the display. This indicates that sound number 01 (PIANO 1) is being used for the Chord part.

  The basic Chord part for the POP ROCK pattern is as shown at left. Let's try adding the eighth notes shown at left to the last beat of the second measure. Use the keys from C1 to B4 to input the Chord part. If you want to use a sound other than PIANO 1 for the Chord part, select the sound you want using the **Selector** buttons to change the sound number shown in the display. You should also use the **ACC. Volume** buttons to set the volume of the Chord part at this time.

- Thus far, we have changed each of the elements (rhythm, bass, chord) of the POP ROCK Basic pattern — but we have not yet stored the revised pattern in the FS660's user memory. Before we cover the procedure for storing, let's change the Fill-in and Intro/Ending patterns as well.

**Important:**
As you've probably observed by now, pressing the USER PROGRAM PATTERN MAKER keys (F#5, G5, G#5) **once** lets you **add** to that portion of the existing pattern. Pressing the same key a **second** time **erases** that portion of the pattern allowing you to rebuild it from scratch.

A – 11
Pattern Maker: Creating Fill-in and Intro/Ending Patterns

Fill in and Intro/Ending patterns can also be changed using the same procedure that you used to change the Basic pattern in the previous page.

1. Let's try changing the Fill-in pattern.
   With Rhythm #15 (POP ROCK) still selected, press the Sync./Fill in button. You should hear the POP ROCK Fill-in pattern. Try to change this Fill-in pattern to suit your taste using the same procedure that you used to change the Basic pattern.

2. Last, let's change the Intro and Ending patterns.
   If you press the Intro/Ending button, you will hear the POP ROCK Intro pattern. Press it once more and you will hear the Ending patterns. Go ahead and edit these patterns as you like using the same procedure as before.

Notes:

1. The tempo you use when creating Auto-Accompaniment patterns will not be memorized! When creating difficult patterns, feel free to slow down the tempo for input, then speed it up again when performing.

2. The same bass and chord sounds will be used for all four pattern types (Basic, Intro, Fill-in, and Ending) of a single Auto-Accompaniment pattern. The last sounds you choose for the Bass and Chord parts are the ones that will be memorized when you store the pattern. For example, if you had chosen E. BASS for the bass part sound when creating the Basic pattern, but later changed it to A. BASS when creating the Ending pattern, then A. BASS will be memorized as the bass part sound for all four of the patterns. Note also that the SPLIT sounds, those numbered 41 through 50, cannot be chosen as the Bass or Chord part sounds.
3. If you incorrectly enter one or more notes while creating any part of the Auto-Accompaniment pattern, just press the CLEAR key for that part and all of the notes that you input will be erased. (For example, if you press the F#5 key while creating the bass part for a pattern, the entire bass line will disappear.) You can use the RHYTHM ERASE key to remove individual rhythm sounds from a Rhythm pattern. (For example, to remove only the closed hi-hat sound from a Rhythm part, hold down the A5 key and press the F#1 key, which controls the closed hi-hat sound. That sound will be removed from the Rhythm pattern.)

4. As mentioned in an earlier note, the CLEAR key for each part operates in two ways. When pressed once, the original pattern for that part remains unchanged and you can actually add notes to the part. When you press the CLEAR key a second time, all the notes for that part will be erased — allowing you to build an entirely new part from scratch. If you want to change the original pattern to something entirely different, however, press the CLEAR key two times to erase the entire part.
Pattern Maker:
Storing Your New Patterns

Now that we’ve create an entirely new pattern, let’s store it in the FS660’s user memory using the following procedure:

Storing patterns
1. Press the Start/Stop button and the pattern you just created will be stored as pattern number 50 (USER). Try using the Rhythm button and the Selector buttons to select this pattern. Now when you press a note in the Lower Keyboard with Auto-Accompaniment ON, you should hear the pattern you just created.
Programmable ONE FINGER AD-LIB: Creating Phrases

With the FS660's new programmable ONE FINGER AD-LIB capability, you have the power to create up to 17 different ONE FINGER AD-LIB phrases of your own. Here's how:

1. Begin by choosing a rhythm using the Rhythm button and the Selector buttons.

   Then, press the Pattern & O.F. AD-LIB button. Next, press the ONE FINGER AD-LIB button. The letters $R_d$, which are short for "Ad-lib," will appear in the display. (You can produce the same results by pressing the A#5, B5, or C6 key on the keyboard.)

   The Ad-lib phrase for the G2 key should also begin to play.

2. Select the phrase which you want to modify by pressing the key for that phrase in the ONE FINGER AD-LIB section of the keyboard.

   The Ad-lib phrase you’ve selected will begin to play.

   The sound number for that phrase will be shown in the display. When you’re ready to erase the phrase you’ve selected, press the C6 key (PHRASE CLEAR) and that phrase will disappear.
3. Inputting the new phrase.

Use the keys from C1 to B4 to input the new phrase.

If you find that this range isn’t high or low enough to play the Ad-lib phrase you have in mind, press the B5 (OCTAVE SHIFT) key. This key can be used to shift the range played by the keys from C1 to B4 up or down an octave, as shown in the diagram left.

Pressing the OCTAVE SHIFT key one time causes the keyboard to shift up one octave. Pressing a second time restores the keyboard to the normal pitch.

Pressing the OCTAVE SHIFT key a third time causes the keyboard to shift down one octave. Pressing a fourth time restores the keyboard to the normal pitch.

You can also use the MASTER VOLUME buttons to set the volume of the Ad-lib phrase which will be memorized when you store the phrase.

4. Inputting additional Ad-Lib phrases.

Suppose you want to input a second Ad-Lib phrase. To do this, make sure that your first customized Ad-Lib phrase (from Step 3 above) is finished. Now, press the POINT SELECT key (A# 5). This tells the FS660 that you are done with the current phrase.

Now, repeat Steps 2 and 3 above to input a new Ad-Lib phrase. When you are done with this second phrase, press the POINT SELECT key again. You can continue this process until all 17 Ad-Lib keys have been programmed with your own customized phrases.

The next section will show you how to store your newly created AD-LIB phrases.
Now use the Selector buttons to select a voice for the phrase. The length of a ONE FINGER AD-LIB phrase is limited to one measure. You can change any number of ONE FINGER AD-LIB phrases for a given rhythm — up to seventeen for each Rhythm pattern. When you’re finished changing the phrases, you can store them for future use using the procedure below.

**Storing ONE FINGER AD-LIB phrases:**

1. Press the Start/Stop button. The pattern (with the new ONE FINGER AD-LIB phrases you just created) will stop and be stored as pattern number 50 (USER). Try using the Rhythm button and the Selector buttons to select this pattern. Make sure that the ONE FINGER AD-LIB button and the Lower mode Auto button are in the ON position. Press Start/Stop button. When you press the ONE FINGER AD-LIB key on which you created the new phrase, you should hear your newly created phrase.
Programmable ONE FINGER AD-LIB: Storing Phrases

Notes:

1. The patterns listed as USER in the "50 RHYTHMS" section are used for storing both the Auto-Accompaniment patterns and the ONE FINGER AD-LIB phrases that you create. Therefore, if you had saved the Ad-lib phrases created above as USER, the modified version of the POP ROCK rhythm pattern (which you created and stored as USER 1 previously) would be erased, and the Auto-Accompaniment rhythm pattern you selected in order to create the Ad-lib phrases would take its place. If you would like to create ONE FINGER AD-LIB phrases to go with a rhythm of your own invention, then you should edit and store the rhythm in advance. Then, select this user rhythm when you are ready to create the Ad-lib phrases.

2. It is possible to input up to about 300 notes for a single Auto-Accompaniment pattern (combined total for Basic, Intro, Fill in, Intro and Ending patterns), and up to about 270 notes for all the ONE FINGER AD-LIB phrases for a single pattern (combined total for seventeen phrases).
Using the SYSTEM Functions: Tuning Control

In this section we will outline the FS660's SYSTEM functions (which are concerned with the overall control of the FS660).

**SYSTEM functions**
The SYSTEM functions include:

1. **TUNING CONTROL** (pitch adjustment)
2. **TRANSPOSE** (key change)
3. Accompaniment Hold Pedal function selection
4. Selecting among the four types of Auto-Accompaniment. (Please see the section on "Advanced Use of Auto-Accompaniment Section" earlier in this manual.)

1. **TUNING CONTROL**

Press both the Rhythm button and the Sound 1 button simultaneously, then press the Start/Stop button. The display should begin to flash, alternately showing the letters T U (short for TUNE) and the number 0.

If you press the Selector +1 button once, the number in the display will change to read +1 and the pitch will raise slightly. If you press the -1 button instead, the number will change to -1 and the pitch will drop. You can use the TUNE function to adjust the FS660's pitch within a range of -8 to 7.
2. TRANSPOSE
Press both the Rhythm button and the Sound 1 button simultaneously, then press the Sync/Fill in button. The display will begin to flash, alternately showing the letters E, R (short for TRANSPOSE) and the number 0.

If you press the Selector +1 button, the number in the display will change to read 1 and the pitch will raise by a half step. If you press the -1 button instead, the number will change to -1 and the pitch will drop by a half step. You can use the TRANSPOSE function to adjust the FS660's pitch from -9 half steps to +9 half steps.

3. Accompaniment Hold Pedal function select
Press both the Rhythm button and the Sound 1 button simultaneously, then press the Duet button. The display will begin to flash, alternately reading PE and AC. The AC stands for Accompaniment. PE lets you know that the Accompaniment Hold pedal, when depressed, will control the Accompaniment Hold function. If you press the Selector +10 button, the display should begin to flash, alternately reading PE and dP. The dP stands for Damper. Now, when the Accompaniment Hold pedal is depressed, it will operate as a Damper (or Sustain) Pedal. To return the Accompaniment Hold pedal to its normal function, press both the Rhythm button and the Sound 1 button simultaneously, then press the Duet button and Selector -10 button.
